

Results-driven **Web Developer** with over four years of professional experience **designing, building, and maintaining efficient, reusable, and reliable web applications** that meet organizational goals and client needs. Proven expertise in **optimizing applications for maximum speed and scalability**, delivering measurable improvements such as 25% faster page load times and 40% higher user engagement. Adept at **collaborating with cross-functional teams** to define, design, and ship new features, while **identifying and fixing bugs and bottlenecks** in production systems. Strong command of **API integration**, including secure integrations with payment and banking-grade applications, and experienced in **implementing security measures to safeguard sensitive data**. Skilled in writing **clean, maintainable, and efficient code** following industry standards, **testing web applications for responsiveness and functionality**, and **deploying applications to production environments** while ensuring stability. Holds a Master's degree in Computer Software Engineering (in progress) and a Bachelor's degree in Computer Software Engineering, with active research contributions in applied computing.

CORE COMPETENCIES

- Web Application Development
- Frontend Architecture
- Testing, Debugging & Bug Fixing
- Responsive & Mobile-First Design
- Micro-Frontend Architecture
- CI/CD & Production Deployment
- Cross-Browser Compatibility
- Secure Authentication & OAuth 2.0
- Third-Party Payment API Integration
- RESTful API Design & Integration
- Web Application Security
- Agile / Scrum Methodologies
- Application Performance Optimisation
- SQL Queries & Database Design
- Technical Documentation

EXPERIENCE

Software Engineer

PM Workbench AI

DEC 2025 — Present

Travis County, Central Texas, United State

- Building a scalable frontend application using Next.js 16 (App Router), TypeScript, and Tailwind CSS v4 to deliver a high-performance, polished user experience.
- Implementing the "Sync Pattern" combining TanStack React Query and Zustand for persistent client-side state, alongside custom Axios interceptors for automated authentication token refresh cycles.
- Building third-party API integrations (Slack, Google Drive, and manual file uploads) to feed user feedback into backend AI processing pipelines.
- Implementing WebSocket connections to provide real-time updates on background AI jobs as they transition through extraction, embedding, analysis, and synthesis phases.
- Developing custom interface components, including a Markdown Document Canvas editor, to enable Product Managers to link extracted customer issues directly to product requirements documents (PRDs).

Frontend Developer

Cobone

SEP 2024 — DEC 2025

Dubai, United Arab Emirates

- Designed, built, and maintained high-performance, responsive UI components for the Cobone.com e-commerce web application using React and Next.js, improving visual consistency across UAE, Saudi Arabia, Bahrain, and Kuwait markets.
- Optimized applications for maximum speed, achieving a 25% reduction in page load times on critical product and checkout pages by implementing code splitting, lazy loading, bundle optimization, and efficient caching strategies.
- Collaborated with cross-functional teams including backend developers and UX designers to refine checkout workflows and implement real-time product filtering, contributing to a measurable uptick in sales conversions.

- Integrated multiple third-party payment and banking-grade systems including TouchPoints loyalty program, Tap Payment gateway, and WeBook Events ticketing API, implementing secure payment flows, handling API authentication, and managing transaction states.
- Implemented security measures to safeguard sensitive customer and transaction data across all integrated payment services.
- Revamped the mobile shopping interface with responsive design principles and cross-browser compatibility, resulting in a 40% boost in user engagement and a significant increase in mobile conversion rates.
- Identified and fixed bugs and bottlenecks in the application, collaborating with backend developers to integrate RESTful APIs for payment processing, real-time deal availability, and ticket booking systems.
- Tested web applications to ensure responsiveness and functionality, deploying features to production environments while ensuring stability.

Frontend Developer

JUN 2024 — JUL 2024

YallaCompare

Dubai, United Arab Emirates

- Designed and built efficient, reusable micro-frontend web applications using React, implementing best practices, modular architecture, and user-centric design approaches to ensure scalability and maintainability.
- Optimized applications for maximum speed, achieving a 20% reduction in page load times for the Health Service micro-frontend application by optimizing code, implementing performance best practices, and reducing render-blocking resources.
- Improved user satisfaction by 35% for the Travel Service micro-frontend application through a complete UI redesign, enhanced user workflows, and improved accessibility standards.
- Integrated third-party APIs for insurance comparison and travel booking services, handling API authentication, data transformation, and error handling on the frontend.
- Wrote clean, maintainable, and efficient code following industry standards, creating comprehensive technical documentation for all codebases including component libraries and architectural decisions.
- Reduced onboarding time for new developers by 25% through detailed documentation and knowledge-sharing with cross-functional teams.

Frontend Developer

OCT 2023 — JUN 2024

Transviti

Riyadh, Saudi Arabia

- Developed web-based workforce management portals (TalentVare) covering pre-boarding, onboarding, job posting, interviews, and job offers using React, Redux, and TypeScript, reducing manual processing time by **15 hours/week** and accelerating hiring cycles by **5 days per cycle**.
- Implemented two-way data synchronisation between TaskVare and Microsoft Entra ID (Azure AD) via Microsoft Graph API, reducing data entry errors by **30%** and data discrepancies by **25%**, significantly enhancing cross-platform data integrity.
- Designed and built secure OAuth 2.0 authentication flows and an Azure AD sync interface in React, including employee directory views with advanced filtering and seamless cross-platform user management.
- Enhanced LOADe (Pakistan's e-logistics startup) by developing a recurring delivery automation module, achieving a **40% reduction in assignment errors** and a **15% improvement in overall logistics efficiency**.
- Collaborated with backend teams to review API documentation, implement frontend data validation, and manage comprehensive error states across all RESTful service integrations.

IT Assistant

FEB 2020 — OCT 2023

Pakistan Space and Upper Atmosphere Research Commission (SUPARCO)

Karachi, Pakistan

- Developed a web-based document approval system hosted on the organisational intranet using React.js to automate document management, approval workflows, and record-keeping, decreasing document processing time by **40%** and improving organisational efficiency.
- Built and maintained multiple internal web applications using React.js, HTML5, CSS3, and JavaScript, improving user

- satisfaction by **15%** through enhanced UI/UX and mobile-responsive design across all intranet platforms.
- Contributed to IT infrastructure upgrades that improved system uptime by **20%**, reducing technical support requests and enhancing overall organisational reliability.
 - Participated in agile development cycles, code reviews, and sprint planning alongside senior developers, building a strong foundation in frontend best practices and scalable web application architecture.
 - Ensured all developed web applications met responsiveness requirements and were compatible across multiple browsers and devices used within the organisation.

EDUCATION

MS Software Engineering <i>National University of Computer and Emerging Sciences a.k.a FAST</i>	AUG 2024 — DEC 2026
BS Software Engineering <i>ILMA University</i>	SEP 2016 — OCT 2020

SKILLS

Quantitative Research	Mathematical optimization, Mathematical Modeling, R, MySQL
Web Technologies	HTML5, CSS3, JavaScript (ES6+), TypeScript, AJAX, jQuery, XML, Responsive Design, Progressive Web Apps (PWA)
Frontend Frameworks	React.js, Next.js, Vue.js, Redux, Context API
Styling & UI Libraries	Tailwind CSS, ShadCN UI, Material-UI, Bootstrap, Ant Design, Styled Components, SASS/SCSS
Backend Technologies	Node.js, Express.js, Python, Flask, Next.js API Routes, REST APIs, WebSockets, CRUD Operations
Databases & SQL	MySQL, PostgreSQL, MongoDB, Supabase (PostgreSQL), Firebase Realtime DB / Firestore
Authentication & Security	JWT, OAuth 2.0, Microsoft Entra ID (Azure AD), Clerk Auth, Supabase Auth, Firebase Auth, Secure Payment Flows
API Integration	Microsoft Graph API, GitHub API (Octokit), Stripe, PayPal, Tap Payment Gateway, TouchPoints Loyalty, SendGrid, Twilio, WeBook Events Ticketing
BaaS Platforms	Supabase, Firebase, Clerk Auth, Vercel Edge Functions, AWS Amplify
DevOps & Deployment	Git, GitHub, Docker, GitHub Actions, CI/CD Pipelines, Vercel, Netlify, AWS, Azure, GCP
Automation & Scripting	Python Automation, Web Scraping, Data Processing, Robotic Process Automation (RPA)
AI / ML Integration	TensorFlow.js, Transformer.js, LangChain, Vector Databases, RAG, LLM API Integration
Additional Skills	Chrome Extension Development, Micro-Frontend Architecture, System Integration, Data Migration

PROJECTS

Articulate – AI Writing Assistant (Chrome Extension) <i>React, TypeScript, Vite, Chrome Extension, BaaS, AI APIs</i> View on Chrome Web Store	<i>July 2025 – Present</i>
• Built a complete AI-powered Chrome extension using React frontend, Backend-as-a-Service for data management, and integrated third-party AI APIs for intelligent text generation across LinkedIn and web platforms. • Implemented secure authentication using Clerk, data storage with Supabase, and RESTful API integration for AI prompt processing, ensuring privacy-first architecture with no personal data storage. • Developed responsive frontend UI with React and TypeScript, handling user interactions, API communication, response formatting, and error states for a seamless cross-browser experience.	

Dr. Source – AI Document Assistant

2025

Next.js, React, Python, Flask, Supabase, LangChain, Vector DB, PostgreSQL

[View on GitHub](#)

- Developed a full-stack AI-powered document reading web application using Next.js frontend, Supabase for authentication and data storage, and Python/Flask for AI processing with LangChain and vector databases.
- Built Next.js API routes for document upload, processing coordination, and query handling, integrating Retrieval Augmented Generation (RAG) for intelligent document-based question answering.
- Implemented Flask microservice for AI model integration, handling document embedding, vector storage, and semantic search, connected via REST APIs to the Next.js frontend.
- Used Supabase for user authentication, PostgreSQL database for metadata storage, and file storage system for uploaded documents, deploying the application to production via Vercel.

Green Git Bot – GitHub Automation Tool

2025

Node.js, TypeScript, GitHub API (Octokit), REST APIs

[View on GitHub](#)

- Created a Node.js automation tool leveraging GitHub REST API via Octokit for generating customized commit patterns, demonstrating strong third-party API integration and system automation capabilities.
- Implemented backend automation logic for commit generation algorithms, date manipulation, OAuth authentication, and API request handling with proper error management.
- Built CLI interface using Node.js for user interaction, input validation, and configuration management for production-grade automation workflows.

TaskVare Azure AD Integration – Enterprise System Integration

2023 – 2024

React, Microsoft Graph API, OAuth 2.0, System Integration

[Read Case Study](#)

- Researched, designed, and implemented two-way data synchronization between TaskVare and Microsoft Entra ID using Microsoft Graph API, demonstrating expertise in enterprise API integration and system automation.
- Built React frontend components for Azure AD sync interface, employee directory management, and OAuth 2.0 authentication flows, handling API communication, data transformation, and sync status management.
- Developed automated data migration scripts and synchronization logic, reducing manual data entry errors by 30% and ensuring data consistency across integrated platforms.
